## PROFESSIONAL SUMMARY

AI product builder with a background in computational cognitive science, product management, and applied research. Currently completing an intensive AI-native program focused on building production-grade AI systems from the ground up. Experienced leading cross-functional teams to ship real products — from greenfield AI platforms to open-source software contributions. Passionate about designing human-centered AI tools that close gaps in access to opportunity.

## EXPERIENCE

### [Name of Company or Organization] | [Role Title]

Start date – End date

*One-sentence summary / context about what the company or organization does.*

*City, State / Country*

- Explain a major accomplishment, starting with a strong action verb and include as much quantitative detail and success metrics as possible
- List up to three bulletpoints, ensuring that each point highlights a different accomplishment or set of skills you used in this role
- Order the bulletpoints by strength of accomplishment, placing more major accomplishments at the top of the list

### SkillLab | Product Manager

March 2024 – Present

*SkillLab uses AI to connect people to jobs, careers, and education opportunities on the level of skills.*

*Amsterdam, Netherlands*

- Leading 12+ engineers, designers, and data scientists to deliver a multi-product platform for managing national occupation and skill taxonomies; go-live in December with forecasted revenue impact of XXM+
- Driving product vision, definition, and roadmap for a greenfield AI-powered product by collaborating tightly with C-level stakeholders and enterprise clients; launched the MVP for our largest client in under 4 months
- Continuously leveling up core product and org systems; most recently launched a centralized issue prioritization system, led an org-wide redesign for enterprise delivery, and designed a new performance management framework

### MIT Human Cooperation Lab | Graduate Researcher

Feb. 2021 – May 2022

*HCL bridges behavioral economics and computational modeling to study human decision-making.*

*Cambridge, MA*

- Created a computational model to predict cognitive reflection – one's propensity to engage in reflective thinking – from Twitter features
- Model outperforms similar personality-predicting models trained on digital fingerprints by over 10%, on average

## TECHNICAL PROJECTS

### Honcho | Open Source Contribution

April, 2026

*Contributed to Honcho, an open-source agent memory and personalization framework by Plastic Labs.*

- Identified and resolved a bug in the session context retrieval logic that caused stale memory entries to surface in multi-turn agent conversations; submitted a documented PR spanning 3 files and 80+ lines changed, reviewed and merged by the core maintainer team within 48 hours
- Navigated an unfamiliar production Python codebase of 10,000+ lines from scratch — traced data flow across 6 modules, wrote 4 targeted regression tests to reproduce the issue, and authored a clean fix with inline documentation meeting the project's contributor standards

### FlowForge | AI Workflow Automation Tool

June, 2025

*A natural language-driven automation tool that converts plain-English task descriptions into multi-step workflows.*

- Designed and built an end-to-end system that decomposes a plain-English task description into discrete steps and executes them by chaining API calls — reducing a 15-minute manual workflow to under 30 seconds for 3 recurring use cases
- Implemented a structured prompt pipeline with output validation and graceful error recovery across 5 workflow templates; deployed with a lightweight CLI interface and shipped from zero to working demo in under 2 weeks using Claude Code

## EDUCATION

### Pursuit | AI-Native Program (Inaugural Cohort)

Mar. 2025 – Present

*600+ hour, 7-month intensive program focused on building complex products end-to-end with the latest AI tools.*

*Long Island City, NY*

- Shipped 10+ end-to-end builds across the program — progressing from solo web apps with HTML/CSS and REST APIs to multi-person team PRs on real open-source codebases — each cycle delivering a demo-ready product within 2 weeks
- Wrote 8+ full PRDs, conducted product teardowns, built industry-specific features informed by business model research, and presented decisions to industry partners, Pursuit staff, and the wider Builder community
- Executed a 4-week capstone with a real industry partner — conducted discovery, user-tested with 5+ real users, incorporated feedback, and delivered a live demo at Demo Day

## SKILLS & INTERESTS

**Stack:** Python, Git/GitHub, HTML/CSS, REST APIs, LLM APIs, Claude Code, Cursor, VS Code, React, NodeJS, MongoDB, pandas, numpy, sklearn

**Languages:** English (fluent), Spanish (working proficiency), Chinese (elementary proficiency)

**Hobbies:** Zumba instructor (5 yrs.), Camp Kesem counselor (3 yrs.), award-winning pianist (16 yrs.), improv comedy (1 yr.), marathon runner
